

A general introduction to all the Tetbury U3A Computing groups is available [here](#). The specific purpose of Tetbury U3A Windows group is to discuss features of and issues with the Windows 10 operating system, and to a lesser extent Microsoft Office and similar software. **Problem solving is a key part of its remit.**

It is currently holding Zoom meetings on an ad-hoc basis. If you are interested in joining the group please contact the [group leader](#)

“How to” documents

A number of similar issues have been identified by various members and in order to make information readily available it was decided to prepare a series of “How to” documents that would be available to all members of Tetbury U3A via the web.

We currently have available the following documents:

[Which version of Windows](#)

[Uninstall software in Windows](#)

[Screen Shots in Windows](#)

[How to Change settings in the Windows Mail App](#)

If you wish to suggest an amendment to any of these documents, or you have a suggestion for another topic to be covered please contact the [group leader](#). One future topic already identified is “Installation of Linux on an older windows machine to improve performance”

Future Area of Interest

The recent announcement by Microsoft of the future release of Windows 11 is certain to be of interest to members of the group. Especially as it might be made available on a fee basis, not unlike Microsoft 365, hosted on a remote server. This should enable it to be used on machines that do not meet the strict technical requirements for it to run on a local PC.
