

Website Tools and u3a Beacon Database Administration

The primary task of this group is to learn and share knowledge of the latest website design tool technologies and the u3a Beacon database management system. The secondary task is to ensure these skills are distributed amongst our membership for continuity purposes.

The tetburyu3a.org.uk website is built using open-source WordPress CMS and high-level tools and is hosted on siteground.co.uk servers. It will be helpful if you have some experience of using the latest website tools. Please note, no coding is required.

The Beacon membership database, bulk emailer and finance tools are licensed to us by the [u3a Trust](http://u3a.org.uk). To join this group, you should have some interest in and knowledge of managing database content.

Lawrence will welcome your interest and willingness to learn and share your technical expertise. We will use a combination of free and licensed tools such as, MAMP; WordPress; Elementor; and various Plugins to build Websites on local and remote hosts. For the u3a Beacon database we will make use of the u3a demonstration tool Demoton which contains fictitious data only.

I look forward to hearing from you.

Lawrence
